OTHER PROJECTS

- **Loopy Part Models for Face Detection** *INRIA-Saclay*
 Advisor: Iasonas Kokkinos and Dhruv Batra Summer 2014
 Augmented the Deformable Parts Model (DPM) based face detector and landmark estimator with loopy part models. Utilized dual decomposition and an augmented lagrangian technique called ADMM (Alternating Direction Method of Multipliers) to solve the resulting inference problem efficiently, often achieving zero primal dual gap. Applied the model to get results comparable to the state of the art for detection and landmark localization
- **Understanding and Predicting Importance** *Virginia Tech*
 Advisor: Devi Parikh Spring 2014
 Formulated importance prediction in abstract images as a structured prediction problem, where importance is defined as the likelihood of an object in an image being mentioned in a description. Incorporated task related insights into feature and model (structure) selection. Predicted importance of objects at upto 86 % accuracy on the Abstract-50S dataset
- **CanSat 2011** *IIIT Hyderabad*
 Advisor: K.S. Rajan Summer 2010
 Designed, fabricated and launched into the lower space an autonomous micro-satellite carrying a large raw hen's egg intact - from *launch* to *landing*. Ground station set up to monitor the mini-satellite. Involved in CanSat testing, circuitry and sensor integration teams
